NEW SEAL SYSTEM

NO. 13

DATE: 10/10/02

RE: ALL GO-DEVIL MODELS BUILT AFTER AUGUST 2001

The latest enhancement to the Go-Devil engine is the new seal system. This innovative design includes: (2) heavy-duty industrial lower seals with stainless steel springs that provide maximum defense from the elements, a fishing/decoy line and grass guard to protect the seals, a centrally located bronze bushing to reduce shaft whip in the housing for smoother operation and longer seal life, and an upper ball bearing with eccentric locking collar and grease fitting. This combination will ensure extended life to the Go-Devil drive unit.

The new seal system comes on every Go-Devil that has been manufactured since August 2001. The new seal system can also be retrofitted to any Go-Devil that we have built over the past 25 years.
