**RE: FUEL (GASOLINE) USED IN ALL GO-DEVILS**

Due to the overhead valve design of the engines that we are using, we highly recommend that all Go-Devils use mid grade or premium gasoline with a higher octane. These engines have a higher compression ratio than the old L-head style engines.

**REMEMBER TO RUN THE ENGINE COMPLETELY OUT OF FUEL BEFORE STORAGE OR WHEN THEY ARE NOT GOING TO USE IT FOR A FEW WEEKS. THE GASOLINES AVAILABLE TODAY WILL EVAPORATE AND TURN INTO VARNISH IN THE CARBURATOR THEREBY RUINING THE CARBURATOR BEYOND CLEANING. WE ALSO RECOMMEND USING A FUEL-STABILIZER, BRIGGS & STRATTON PART # 100117, IN THE LAST TANK OF FUEL BEFORE STORAGE.**
